

Dear Michael Gove, my name is Edward [redacted] I am writing to you because the levels of NO₂, O₃ and CO₂ have grown way too high. I am attempting to make you see how devastating

air pollution has become and want you to put an end to it. Air pollution is not only terrible for the planet but deadly to humans as well 40,000 people are killed every year the nitrogen dioxide, ozone and carbon dioxide. Another reason I am writing is because I ~~myself~~ am asthmatic so I am particularly affected by it. Air pollution causes diseases such as heart disease, diabetes and asthma. It is sometimes visible in big cities such as London and Hong Kong ~~it is~~ I know because I have asthma, that air pollution makes my condition even more uncomfortable than it already is. Particles of NO₂ is too being projected into the air by cars, buses, planes and trains. NO₂ is the most irritating to the lungs out of

NO₂, CO₂ and O₃ but these are quite dangerous PM10 matter

(PM) is also one of the dangerous gases. Vehicles powered by petrol, diesel or coal could be limited to a lower amount I ask you to try to get more electric cars on the road. Vehicles are not the only polluting sources smoking is also one could you at least raise the price of cigarettes please. I hope this letter has been persuasive.

Yours sincerely
Edward [redacted]
